6. Waxwork : Work made of wax; especially, a figure or figures formed or partly of wax, in imitation of real beings.
7. Limbs : a part or member of an animal body distinct from the head and trunk, as a leg, arm, or wing
8. Clay : a natural earthy material that is plastic when wet, consisting essentially of hydrated silicates of aluminum: used for making bricks, pottery, etc.
9. Measurements : the quantification of attributes of an object or event, which can be used to compare with other objects or events
10. Sew : the activity to unite or fasten by stitches
11. Satisfactory : is acceptable or fulfils a particular need or purpose.

TASK 2

Complete the following text with the words above!

Perhaps you have read of Madame Tussaud's famous waxwork in London. It is an unusual collection of life-size models of famous men and women of the past and present. Do you know how a waxwork is made? In order to make a life-like model, a great deal of time, skill and patience are needed.Firstly, the subject (usually a well-known person) has to be interviewed. This can take place in a palace, theatre dressing-room or a government office. Sometimes the interviewer has to travel thousands of kilometers to meet the subject.At the interview, exact mould are taken of all the important details of the subject, as to his hair, eyes or skin colour. Photographs of the subject are also taken from every angle.Immediately afterwards, a copy of the subject's face is made from grey potter's limbs and measured against a life-size photograph of the subject. If the copy is interesting, a mould is made from it. This is dried so as to drive out all the air bubbles inside.

Next, wax is melted. In the process, oil colours are added to give the correct flesh-colour. The wax is then poured into the face clay .

Meanwhile, different work goes on in other sections, where the body and limbs are fashioned. Whenever possible, moulds are made from the subjects' own hands and legs, especially if he or she is an athlete.

When the face has set in the mould, the face is removed, and the final touches such as eyes and eyebrows are added. It may take as long as a measurements for an expert worker to sew in a whole head of hair, strand by strand !

Then, the whole life-size waxwork is dressed in suitable clothes and placed in an exhibition pose for satisfactory

TASK 3

Decide whether these statements below are true or false based on the text above!

1. Madame Tussaud is the common collection of the past and present.

   True

2. The similar meaning from famous is well-known.

   True

3. Based on the text, Madame Tussaud is taken place in Bangkok.

   False

4. The precise measurement is important at the interview.

   True

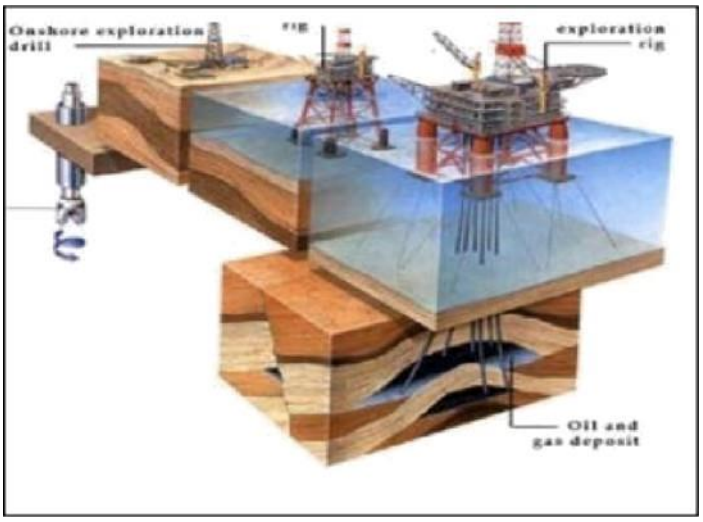

5. When the face is settled, the face is detached.

   False

PRACTICE 4

PRACTICE 4

Read the test and change the holded and underlined iiiistaken words **wftb the correct oaes.**

What is oil? Oil is formed from the remains of tiny plants and animals which fell to the bottom of the sea millions of years ago. As time passed, mud and rock buried the remains of this plants and animals, pressing down on them with great pressure. The pressure, heat from inside the earth and bacteria, which fed or the remains of the plants and animals, caused a chemical change to take place. The result was oil. Often the on remained deep inside the earth, but sometimes it came up to the surface of the earth as a thick, **stick** black substance.

Man have known of oil thousands of years but its importance as a fuel was not discovered until the **nineteen** century. First a method of getting the oil up from deep inside the earth was needed. In the middle of the nineteenth century a American called Edwin Drake found that oil could be brought up to the surface of the earth using a drill. Drilling a hole in the earth to find water was common at that time, so Drake decided to build a doll to find oil. He drilled the first oil well in Pennsylvania, USA in 1859 and found oil Z 1 metres beneath the surface. Soon men in different countries around the world **begin** to drill for oil. Oil was found in Russia, Turkey, and Persia. In 1922 large amounts of oil were found in Venezuela, a country in South America. In 1922 oil was found in the Middle East, in Bahrain and Kuwait.

Huge amounts of od have been found since then, and there are important oil fields in and around the islands of Indonesia. In 1972 Indonesian oil production first passed I minion barrels a day. In 1981 Indonesfin oil exports earned U.S. 3 i a,ogs,a fl,O0O — over 70070 of total exports that year. With improved offshore drilling methods, Indonesia continues to be the **larger** producer in South East Asia.

Oil is nDw used as a fuel for transportation and for **industrial.** In addition, hundreds of useful chemicals are made by oil. These chemicals are used to make such things as plastic, cloth and fertilizer. Today on is being used more quickly than new supplies of oil can be found. There is a shortage of of, so the price of oil and things made from oil increases every year. Governments all over the world are searching for **difference** fuels which could be used to heat, light and ocngM our homes and which could be used in cars, trucks, trains and other forms ol" transportation when the world's supplies of oil are finished. *I Tukrn ftmm*

CREATIVE ENGLISH 3 -Dr. J. C. Richards and Drs. I Made Markus - Sumber Gambar: https://www.google.com/search?q=gambar+pengeboran+minyak)

Answer :

a) this = these
b) stick = sticky
c) have = has
d) nineteen = nineteenth (19th)
e) a = an
f) begin = began
g) larger = largest
h) industrial = industry
i) by = with
j) difference = different
k) cooling = cool

PRACTICE 5

Read again the text and choose TRUE or FALSE for the following statements.

No.	STATEMENTS	T	F
1.	Oil is formed from sea water.		✓
2.	It takes millions of years to form oil.	✓	
3.	When oil comes out of the ground it is a thick liquid.		✓
4.	Oil has been used as a common fuel for over 1,000 years.	✓	
5.	The importance of oil was discovered in this century.		✓
6.	The first oil well ever drilled was in the USA.	✓	
7.	Oil is used to make chemicals.	✓	
8.	Hundreds of new supplies of oil are being found today.		✓
9.	There is plenty of oil in the world for the needs of transportation and industry.		✓
10.	Scientists are trying to find a replacement for oil.	✓
