Interesting Inventions

After several decades, jogging is still a very popular activity in the United States. Many people like to go jogging early in the morning before work or after work in the evening. However, in the winter months especially, it may be dark during those hours. To help these joggers, a sports shoe manufacturer has invented a new kind of jogging shoe. These shoes have little red lights on the back of the heels. The lights are very small and lightweight. They are run by tiny batteries. With these new shoes, the jogger can feel much safer running along the road in the dark. The lights make the jogger much more visible to the drivers of motor vehicles. This may reduce the risk residents

If you have too much noise in your life, an American company has a special prod uct for you! This product is a machine that can eliminate sound waves from the air Machines like this are already in use in some very noisy factories. Soon there will be models for use in large trucks. Yet another model, the "personal quieting machine" is designed for use in homes or offices It will be able to eliminate all kinds of unpleasant background noises, including street and airplane traffic A quieter environment in the home could mean reduced stress and improved mental and physical health. A quieter office could allow greater productivity and job satisfaction.

Have you ever noticed how much of the potato is wasted when you peel it? When you are peeling just a few potatoes for your dinner, this does not matter, of course. But just imagine what happens when potatoes are peeled in factories. Industrial potato peelers, In fact, waste an average of 15% of the potato. In the largest factories, billions of pounds of potatoes are processed every year. This means a loss of millions of dollars annually. Now, new technology may bring an end to that loss. A special kind of laser potato peeler has been developed to eliminate almost all of the waste. However, this new peeler is not for everyone. Only the largest manufacturers will be able to afford to buy the new machine. Each one costs over a million dollars!

Paragraph 1

Topic: A new kind of jogging shoe

Main Idea: A new kind of Jogging shoe has lights on them for night safety.

Topic sentences : . Many people like to go jogging early in the morning before work or after work in the evening.

Supported sentences : The lights make the jogger much more visible to the drivers of motor vehicles.

Paragraph 2

Topic: Quieting machines

Main Idea : Quieting machines reduce noise at work and at home.

Topic sentences : American company has a special prod uct for you! This product is a machine that can eliminate sound waves from the air

Supported sentences : A quieter office could allow greater productivity and job satisfaction.

Paragraph 3

Topic: A new laser potato peeler

Main Idea: A new laser potato peeler reduces waste in factories

Topic sentences : In the largest factories, billions of pounds of potatoes are processed every year.

Supported sentences : Now, new technology may bring an end to that loss. A special kind of laser potato peeler has been developed to eliminate almost all of the waste

People's Ideas About World Geography

What happens when you ask someone to draw a map of the world? The results can be very interesting. Few people, in fact, have a very accurate Idea of what the world looks like. You might expect some mistakes in the positions of the countries. After all, this is a task that requires a certain skill with a pencil and a good memory. But many people do not even know the relative size of the continents. They tend to enlarge them or make them smaller, according to their point of view. For this reason, the home continent is often drawn too large. A Brazilian, for example, tends to enlarge the continent of South America, while a Vietnamese enlarges Asia.

Another common error is the tendency to make Europe too large and Africa too small. People from all parts of the world tend to draw the world this way, including the Africans! There are several factors that may be involved here. One factor may be the influence of old maps made with the "Mercator projection." This technique for drawing maps makes areas nearer the North Pole, including Europe, seem extra large. Other areas in the middle, such as Africa, seem smaller than reality. However, the Mercator maps also enlarge Greenland and Canada, and people usually do not make mistakes about their size. Thus, a better explanation must lie in people's ideas about the relative importance of the continents. The size of Europe tends to be exaggerated because of its importance in people's minds. Similarly, Africa becomes smaller because people feel it is unimportant.

Ignorance about the African continent has led to some enormous errors in map making. One of the errors now seems quite incredible. In the late 18th century, a European explorer reported seeing mountains in southern Mali. From that report, a map maker drew in a long line of mountains. These "Kong Mountains," as he called them, appeared on almost all maps of Africa in the 19th century. They seemed to be an important feature of the continental geography, European politicians and traders made decisions based on their belief in the existence of these mountains. Finally, in the late 1880s, a French explorer proved that there were no mountains in that part of Africa. Only then did the "Kong Mountains" disappear from maps of Africa.

Paragraph 1

Topic : Hand-drawn maps of the worlds

Main Idea : Hand-drawn maps of the world often do not show accurate sizes of the continents.

Topic sentences : Few people, in fact, have a very accurate Idea of what the world looks like.

Supported sentences : They tend to enlarge them or make them smaller, according to their point of view. For this reason, the home continent is often drawn too large.

Paragraph 2

Topic: The size of Europe and Africa on most hand-drawn maps

Main Idea: On hand-drawn maps of the world, Europe and Africa are often drawn the wrong size.

Topic sentences : Another common error is the tendency to make Europe too large and Africa too small.

Supported sentences : The size of Europe tends to be exaggerated because of its importance in people's minds. Similarly, Africa becomes smaller because people feel it is unimportant.

Paragraph 3

Topic: Errors on maps of Africa

Main Idea: Errors on maps of Africa often were due to ignorance about the African continent.

Topic sentences : . In the late 18th century, a European explorer reported seeing mountains in southern Mali.

Supported sentences : Finally, in the late 1880s, a French explorer proved that there were no mountains in that part of Africa.

Consequences of an Aging Population

The average age of the population of many countries is getting older. That means that businesses in those countries must adjust to older customers. In fact, many companies are working to respond to the special needs of the elderly. One example of this is the medical industry. New medicines and technologies are being developed especially for the health problems of older people. Another business that offers services for the elderly is the tourist industry. Many travel agents offer special trips for groups of older people. And, finally, there are many different kinds of products made for the elderly. These include everything from shoes and shampoos to magazines and furniture.

In industrialized countries today, many elderly people suffer from depression. The main cause of this is loneliness. In the past, older people usually lived with other members of the family. They usually had some responsibilities around the home. For example, older women could help take care of the children or prepare meals. Older men could help their sons at work or around the house. These days, married children often prefer to live on their own, sometimes far away from their parents. Thus, older people may be cut off from family ties. They may feel cut off from the world around them. Life has changed so much so quickly that older people sometimes feel that they do not belong any more.

Paragraf 1 :

Topic: New services for older customers

Topic Sentence: That means that many businesses in those countries must adjust to older customers.

Main Idea: Many companies are developing products and services for the increasing elderly population

Paragraf 2 :

Topic: Causes of depression in elderly people

Topic Sentence: In industrialized countries today, many elderly people suffer from depression.

Main Idea: The elderly people in industrialized countries are often depressed because of loneliness.

Panda Bears In China

The giant panda bear is a favourite of children and animal-lovers throughout the world. For many people, it also is symbolic of the sad situation for many other kinds of animals. Though so well known and loved, the panda is slowly dying out. At present, there are only about 1,230 wild pandas left in the world. They all live in China, in the forests of the Sichuan and Shaanxi provinces. Pandas used to be common in other areas. However, as the human population increased and the forests shrank, the panda territory gradually disappeared. And so did the pandas. Now the Chinese government has created a number of "Panda reserves" to protect the pandas. Within these reserves, human settlement and tree cutting will be limited.

A new born panda is a tiny, helpless little creature, It looks like a little pink pig, and its eyes remain closed for three to four weeks. Pandas develop fairly slowly, compared to most animals. The babies are completely dependent on their mothers for a long time. In fact, they don't even begin to walk until they are about five months old. The only food they eat for at least a year is their mother's milk. That doesn't stop them from growing, however. Pandas may weigh over 55 pounds by the time they are a year old. Around that time, the young panda begins to eat bamboo, like its mother. This may not seem like a fattening food, but young panda bears gain weight quickly on this diet. By the time it is a year and a half old, a panda bear may weigh over 100 pounds.

Chinese scientists recently had a chance to study a wild female panda bear with a new born baby. She was a very loving mother. For 25 days, she never left her baby, not even to find something to eat! She would not let any other panda bears come near. She licked the baby constantly to keep it clean. Any smell might attract natural enemies that would try to eat the little panda. The mother held her baby in her front paws much the way a human does. When it cried, she rocked it back and forth and gave it little comforting pats. The mother continued to care for the young bear for over two years. By that time, the panda no longer needed its mother for food. However, it stayed with her and learned about the ways of the forest. Then, after two and a half years, the mother chased the young bear away. It was time for her to have a new baby, and it was time for the young panda to be independent.

Paragraf 1 :

Topic: The giant panda

Main Idea: The giant panda is slowly dying out in China.

Topic sentences : The giant panda bear is a favourite of children and animal-lovers throughout the world.

Paragraf 2 :

Topic: A newborn panda

Main Idea: A newborn panda is mall and help- less for over year.

Topic sentences : The giant panda bear is a favourite of children and animal-lovers throughout the world.

Paragraf 3 :

Topic: A mother panda

Main Idea: A mother panda is very loving to its young.

Topic sentences : : For 25 days, she never left her baby, not even to find something to eat! She would not let any other panda bears come near.

The Exxon Valdez Oil Spill

On March 24, 1989, an enormous ship called the Exxon Valdez was traveling along the coast of Alaska. It was carrying about 50 million gallons of petroleum from the Alaskan oil fields. In Prince William Sound, the captain ran the ship ground. Some of the ship's tanks broke open and about 10.8 million gallons of petroleum poured out into the sound. It took three years and over 10,000 workers to clean up the oil. In the court case about the accident, the judges decided that the Exxon Company was responsible. The company had to pay $900 million for damages. Even that large sum was not enough to pay for all the workers, equipment, and research that was necessary. The total cost of the clean-up effort was about $2.5 billion.

A tourist passing through Prince William Sound today would probably see no sign of the 1989 oil spill. The coast is once more a spectacular, wild place with clean water and beaches. However, to a more experienced eye, the scenery is not quite the same as before. For one thing, the beaches are too clean. The workers used hot water to clean oil off the rocks and sand. But in the process they also killed many kinds of marine plants. Rockweed, for example, is a brown plant that grows on rocks and in shallow water. Before the clean-up, it was very common along that coast, but afterwards it almost completely disappeared. Another difference is the decrease in the bird population. Over a half million birds died as a direct result of the oil spill. Certain kinds of ducks and ocean birds were especially unfortunate. Researchers guess that their population declined by up to 70-80%.

As scientists study the effects of the Valdez oil spill, they are discovering new problems. The oil not only caused the immediate deaths of many animals. It also had longer term effects on many other animals. The harbor seal (a marine mammal) is one example. At first, scientists hoped that the seals would stay away from the areas where there was oil. But instead, the seals swam right through the oil and came out on oily beaches. Scientists noted that these seals seemed sick, and in fact many disappeared. At an earlier counting in 1975, there were about 13,000 harbor seals in Prince William Sound. After the spill, there were only about 2,500. Research on the bodies of dead seals showed that they suffered some brain damage. This may have caused the seals to become confused and drown. The oil also seems to have affected the ability of female. seals to have healthy babies. In the year after the oil spill, there were many more deaths than usual among baby seals.

Paragraf 1 :

Topic: The oil spilled by the Exxon Valdez tank ship

Main Idea: The oil spilled by the Exxon Valdez tank ship in an expensive and difficult clean-up job.

Topic sentences : Some of the ship's tanks broke open and about 10.8 million gallons of petroleum poured out into the sound

Paragraf 2 :

Topic: Some consequences of the oil spill

Main Idea: Some consequences of the oil spill are not immediately apparent.

Topic sentences : Over a half million birds died as a direct result of the oil spill.

Paragraf 3 :

Topic: The effects of the oil spill

Main Idea: The effects of the oil spill include long term problems for many animals.

Topic sentences : At an earlier counting in 1975, there were about 13,000 harbor seals in Prince William Sound. After the spill, there were only about 2,500.

Auotomoblles (Problem and Solution)

The idea of a small electric car is not new. A number of different car manufacturers already sell such cars. But now a French company, Renault, has designed a very special kind of electric car By pushing a button, you can make it fold up! The back of the car folds into the car body. These cars were designed mainly for use in cities They have several advantages over regular cars. Their small size makes them much easier to drive around busy, narrow streets. They are also much easier to park in city parking spaces. Like other electric cars, these autos do not pollute the air. This is an important consid eration these days when many cities have serious pollution problems.

Many studies have shown that it is better to wear your seat belt when you are traveling in a car Seat belts greatly reduce the risk of death or injury in an accident This fact is widely recognized and many governments have passed laws requiring seat belt use. However, many people still do not wear seat belts. Researchers have found several reasons for this. Some people feel uncomfortable with the seat belt. They are afraid of being trapped in the car in an accident. Others do not think that the seat belt can protect them. They believe that people have no power over their fate. Fate will decide whether they will have an accident and whether they will be injured or die. They think that wearing a seat belt or not will make no difference.

The country with the most crowded roads is Italy. In 1992, there were an average of 101.1 vehicles (cars, trucks, and buses) per kilometer of road in Italy. This can be compared with the vehicles-per-kilometer ratios of other European countries. The ratio varies from 35.8 in France to 74.2 in Great Britain. In the United States, the ratio is 30.6 Part of the reason for Italy's higher ratio lies in its geography. Because much of the country is mountainous, there are fewer roads. Thus the traffic is more concentrat ed on those few roads. This fact has caused some serious problems. Many cities and highways are often blocked by terrible traffic jams heavy traffic has also meant a high accident rate for Italy. And finally, all those cars add to Italy's air pollution.

Paragraph 1

Topic : The new folding electric car.

Main Idea: The new folding electric car has many advantages over regular cars.

Topik sentence : has designed a very special kind of electric car By pushing a button, you can make it fold up! The back of the car folds into the car body

Paragraph 2

Main Idea : In spite of the risks, some people do not wear seat belts.

Topic : Research shows wearing seat belts.

Topic sentence : Many studies have shown that it is better to wear your seat belt when you are traveling in a car Seat belts greatly reduce the risk of death or injury in an accident This fact is

widely recognized and many governments have passed laws requiring seat belt use. However, many people still do not wear seat belts.

Paragraph 3

Main idea : Italy's roads are the most crowded in the world

Main idea : Italy's roads are the most crowded in the world

Topic sentence : The ratio varies from 35.8 in France to 74.2 in Great Britain. In the United States, the ratio is 30.6 Part of the reason for Italy's higher ratio lies in its geography.

Suprising Sources of Disease

People who work in large office buildings get sick more often than normal. They may have headaches, stomachaches, or sore, red skin. The reason for this lies in the buildings themselves. These large buildings usually have windows that cannot be opened. The same air stays in the building for a long time and becomes unhealthy. It may be full of chemicals that come from the furniture, the rugs, or the photocopy machines. Or it may be full of cigarette smoke. This unhealthy air causes "sick building syndrome," as doctors call this problem. In order to cure the people with this syn drome, it is necessary to treat the building. The answer is simple: more fresh air.

Did you know that you could get sick from a pet reptile? In the 1960s, little turtles were very popular as pets in the United States. Then doctors discovered that these tur tles sometimes were sick with an infection called salmonella. People who touched the turtles could catch this infection and become seriously ill. In 1975, the U.S. government banned these turtles as pets. Now doctors think that people, especially small children, can get the same infection from another kind of pet: the iguana. The iguana is a reptile like a turtle and has recently become a favorite pet in many American homes. The government may have to ban these animals, too. For now, doctors say that people should wash their hands very carefully after touching an iguana.

Do you like your meat nicely browned, or even a little black on the outside? If you do, you should perhaps change your tastes. Scientists have found that meat cooked this way can cause cancer. One hamburger or one steak will not give you cancer, of course. But you should probably not eat browned meat every day. This is especially true for children. Children who grow up on a regular diet of browned hamburgers have a much higher risk of cancer. This risk can be prevented by cooking meat in another way. Adding soybeans to the hamburger meat also removes the factors that cause cancer.

Paragraph 1

Topic: Large buildings with unhealthy air

Main Idea: Large buildings with unhealthy air can cause illness for people who work in them.

Topic sentences : This unhealthy air causes "sick building syndrome," as doctors call this problem.

Pragraf 2

Topic: Infections from pet reptiles

Main Idea: Infections from pet reptiles can spread to their owners.

Topic sentences : The government may have to ban these animals, too. For now, doctors say that people should wash their hands very carefully after touching an iguana.

Paragraph 3

Topic: Browned or blackened meat

Main Idea: Browned or blackened meat can result in cancer if you eat it often.

Topic sentences : The government may have to ban these animals, too. For now, doctors say that people should wash their hands very carefully after touching an iguana.

The importance of Sleep

Sleep plays a vital role in good health and well-being throughout your life. Getting enough quality sleep at the right times can help protect your mental health, physical health, quality of life, and safety. Why Is Sleep Important?

Sleep helps your brain work properly. While you're sleeping, your brain is preparing for the next day. It's forming new pathways to help you learn and remember information.

Studies show that a good night's sleep improves learning. Whether you're learning math, how to play the piano, how to perfect your golf swing, or how to drive a car, sleep helps enhance your learning and problem-solving skills. Sleep also helps you pay attention, make decisions, and be creative.

Topic : Sleep plays a vital role in good health

Topic sentences : Studies show that a good night's sleep improves learning

Main idea: Sleep helps your brain work properly. Wuality sleep has important role in physical health.

The Importance of Breakfast

Why is breakfast important? “Breakfast like a King, Lunch like a Prince and Dine like a Pauper” It’s a well known phrase, but do you follow it?

Breakfast provides many benefits to our health and wellbeing. Breakfast provides the body and brain with fuel after an overnight fast – that’s where its name originates, breaking the fast! Without breakfast you are effectively running on empty, like trying to start the car with no petrol!

Breakfast support cognitive function. Breakfast also restores glucose levels, an essential carbohydrate that is needed for the brain to function. Breakfast provides energy, studies have shown how eating breakfast can improve memory and concentration levels and it can also make us happier as it can improve mood and lower stress levels.

Breakfast provides energy needs. People’s energy needs vary depending on activity levels and life stage but typically men require more energy than women. Growing children require a lot of energy, as an example boys aged 7-10 years should consume approximately 1970 kcals per day, and girls aged 7-10 years should consume approximately 1740 kcals.

Topic: importance of breakfast

Main Idea: Breakfast provides many benefits to our health and wellbeing

Topic sentences : importance of breakfast because Growing children require a lot of energy, as an

example boys aged 7-10 years should consume approximately

Supported sentences : Breakfast support cognitive function.

Basketball in the United States

The Los Angeles Lakers is a championship basketball team. Their home court is the Forum, a modern stadium near Hollywood, California. Among their fans are many big names in the entertainment industry, including Jack Nicholson and Johnny Carson. Most basketball teams are based in large cities. Whenever the Lakers play home games, they can be sure of a few movie stars to cheer for them. Laker fans have a lot to cheer about their team has won four championships in recent years.

he Boston Celtics is another championship basketball team. They have won first place among American basketball teams sixteen times. Their home court for many years was the Boston Garden, an old stadium near the waterfront, but they have recently moved to a brand-new arena. Although few famous movie stars attend their games, the Celtics have many fans in Boston Boston fans also support a baseball team. an ice hockey team, and a football team. On evenings when the

Celtics are playing an important game, the theaters and clubs are half empty. All the fans are either at the game or at home watching it on television

Basketball, like other sports, is big business in the United States. The teams are owned by people who view them as a financial investment. Each owner tries to make his team as profitable as possible. Winning is important because it will bring attention to the team. Then many companies will want to advertise their products on television during basketball games. Television advertising is now aimed at specific markets, such as ethnic groups or the elderly When a team is profitable the players profit as well Some basketball players are paid more than a million dollars a year.

Paragraph 1

Topic: The Los Angeles Lakers basketball team (Mostbasketball teams are based in large cities.)

Main Idea: The Los Angeles Lakers is a championship basketball team

Topic sentences :

Paragraph 2

Topic: The Boston Celtics basketball team (Boston fans also support a baseball team, an ice hockey team,and a football team.)A new kind of jogging shoe

Main Idea: Boston Celtics is another championship basketball team

Topic sentences : Although few famous movie stars attend their games, the Celtics have many fans in Boston Boston fans also support a baseball team. an ice hockey team, and a football team.

Paragraph 3

Topic: Basketball as big business (Television advertising is now aimed at specific markets such as ethnic groups or the elderly.)

Main Idea: Basketball, like other sports, is big business in the United States

Topic sentences : When a team is profitable the players profit as well Some basketball players are paid more than a million dollars a year.
